1

Problem and Motivation

- There are three main problems in accessing reliable information, especially on sensitive topics:

 - Information Pollution:** The internet is flooded with unverified and contradictory rulings (fatwas), making it hard to find the truth.
 - AI Hallucinations:** Standard models failing to cite sources and producing inaccurate information.
 - Privacy Concerns:** Individuals often hesitate to ask sensitive questions due to social pressure or embarrassment.

Our Motivation: To resolve this trust crisis with a RAG system that is based solely on verified, closed data sets, provides every answer using sources from the Presidency of Religious Affairs, and protects user privacy.

2Project Objective

- The objective of this project is to build a privacy-focused Retrieval-Augmented Generation (RAG) system. Unlike standard chatbots, this system:

 - Strictly adheres to a closed set of verified soruces from Presidency of Religious Affairs
 - Eliminates hallucinations by citing specific sources for every answer.
 - Can operates locally to ensure user privacy is never compromised.

Feautures and Capabilities
